

SE LAB-2

NAME: DHEEPAK SEETHARAM

SRN: PES1UG24CS152

SECTION: C

1) Jira backlog with Epics and User Stories.

2) Story point assignments

The screenshot shows the Jira interface for a project named 'Coffee-Kiosk'. The top navigation bar includes a search bar, a '+ Create' button, a 'See plans' button, and notification icons. Below the navigation bar, the 'Backlog' tab is selected, showing a list of work items. The 'CK Sprint 1' section is visible, with a 'Start sprint' button and a '0 work items' status. Below the sprint section, the 'Backlog' section shows two work items: 'CK-2 Story 1.1: Coffee Selection' and 'CK-3 Story 1.2: Size Selection'. Both items are assigned to 'Epic 1: Customer Ordering Experience' and have a 'To Do' status. The 'CK-2' item has a value of 3, and the 'CK-3' item has a value of 2. A 'Create sprint' button is visible next to the backlog items.

3) Sprint board (Active Sprint view)

The screenshot shows the Jira interface for a project named 'Coffee-Kiosk'. The top navigation bar includes a search bar, a '+ Create' button, a 'See plans' button, and notification icons. Below the navigation bar, the 'Active sprints' tab is selected, showing a list of active sprints. The 'CK board' is visible, with a 'Complete sprint' button and a 'Group: Story' button. Below the sprint section, the 'TO DO' and 'IN PROGRESS' columns are visible. The 'TO DO' column has a '+ Create' button. The 'IN PROGRESS' column shows two work items: 'Story 1.1: Coffee Selection' and 'Story 1.2: Size Selection'. Both items are assigned to 'Epic 1: Customer Ordering Experience' and have a 'To Do' status. The 'Story 1.1' item has a value of 3, and the 'Story 1.2' item has a value of 2. A 'Create sprint' button is visible next to the work items.

4) Burndown Chart

Reflection Answers

1. Did your estimations reflect the actual effort?

Ans) Yes. Using Fibonacci story points 1,2,3,5,8 allowed us to estimate work based on relative effort and complexity rather than guessing exact hours. This approach accurately reflected the actual workload needed to complete the user stories.

2. Was your backlog well-prioritized?

Ans) Yes. Essential end-user ordering features were assigned higher priority at the top of the backlog. This ensured that the most valuable functionalities were tackled first and delivered as a working product increment in Sprint 1.

3. How did your simulated sprint align with your plan?

Ans) The simulated sprint aligned very well with our initial plan. All committed user stories were steadily moved from To Do to In Progress and finally to Done within the scheduled 1-week duration.

4. What insights did the burndown chart give about your team's capacity?

Ans) The burndown chart clearly visualized our remaining effort dropping from 5 story points down to 0 as tasks were completed. This confirmed that our team's velocity and capacity are well-suited for delivering around 5 story points per sprint.
